BTLO – Challenge ThePackage (easy)

Link : <https://blueteamlabs.online/home/challenge/37>

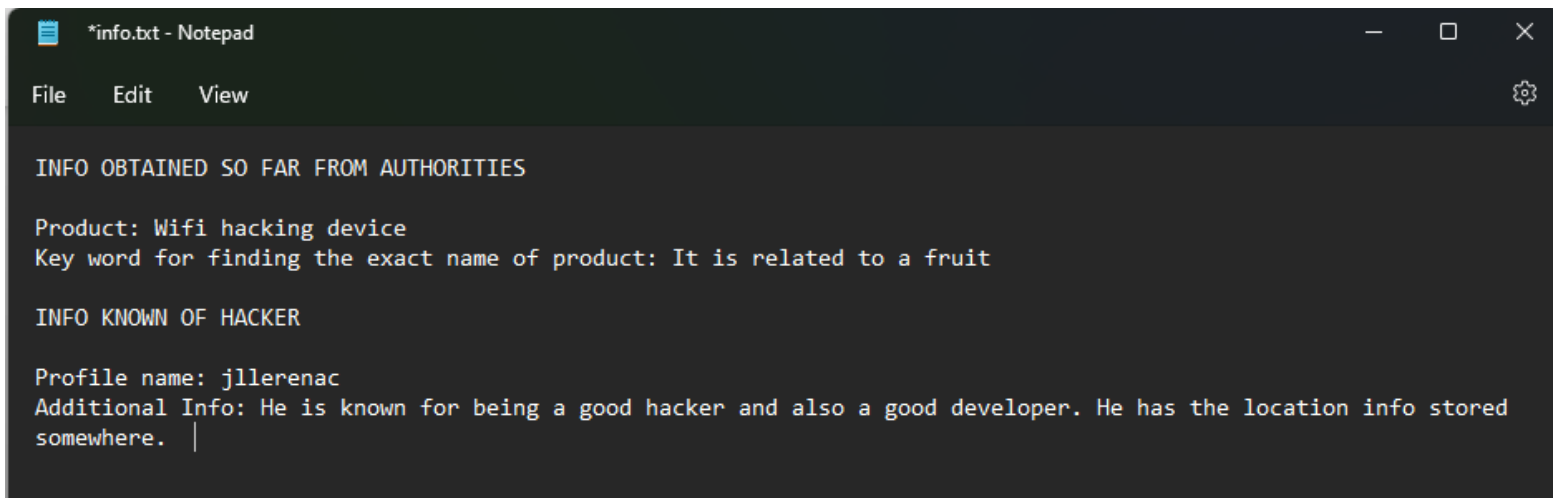

Scenario

Scenario

Authorities are looking for a hacker who is planning to sell a powerful device and the delivery is going to be in a undisclosed but crowded location. It is important to find out what product is and obtain more information about this hacker.

This challenge can be solved by the use of google and it's commands (google dorking).

Dalam soal telah diberikan info.txt yang berisikan :

```
*info.txt - Notepad
File Edit View

INFO OBTAINED SO FAR FROM AUTHORITIES

Product: Wifi hacking device
Key word for finding the exact name of product: It is related to a fruit

INFO KNOWN OF HACKER

Profile name: jllerenac
Additional Info: He is known for being a good hacker and also a good developer. He has the location info stored
somewhere. |
```

Soal :

Challenge Submission

#1) What is the name of the WiFi hacking device? (Format: Wifi X) *(2 points)*

Solved!

#2) What is the name of the website containing the information of delivery location? (Format: WebsiteName) *(2 points)*

Solved!

#3) What is the name of the file containing the information of location? (Format: filename.extension) *(2 points)*

Solved!

#4) Enter the coordinates of the meeting (Format: value, -value) *(2 points)*

Solved!

#5) Where is the delivery going to be? (Format: Location Name) *(2 points)*

Solved!

Soal no 1 :

Untuk menjawab soal no 1, kita tinggal mencarinya dengan google.com dengan keyword seperti di bawah :

keyword : wifi hacking device fruit name

no 1 ans : Wifi pineapple

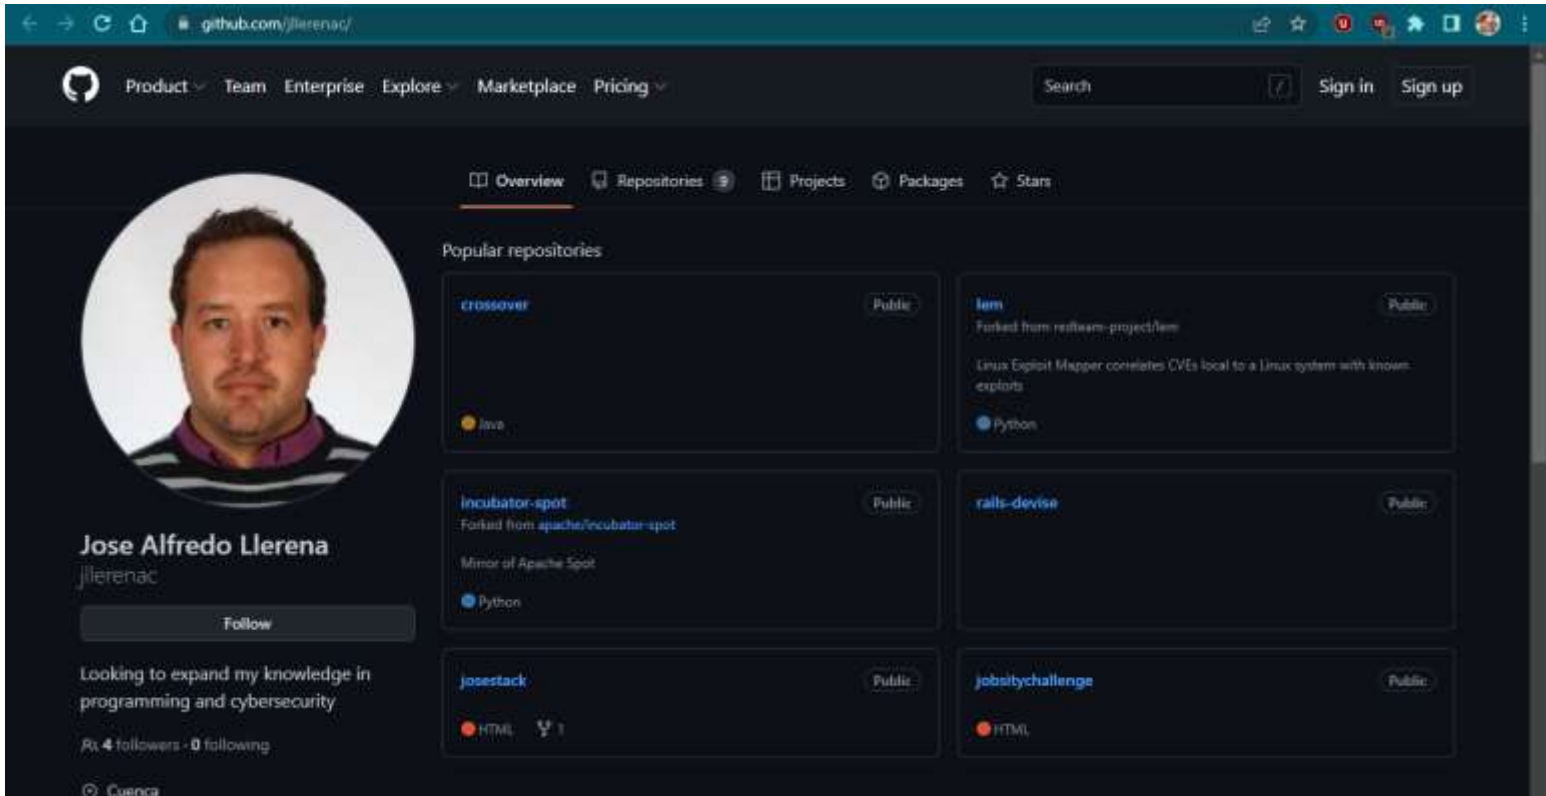

Rionel Irawan / 2440009181
LA07

Soal no 2 :

google dengan keyword sesuai dengan profil nama yang ada pada info.txt (jllerenac)

Hasil pencarian akan mengarah pada github.com

no 2 ans : github

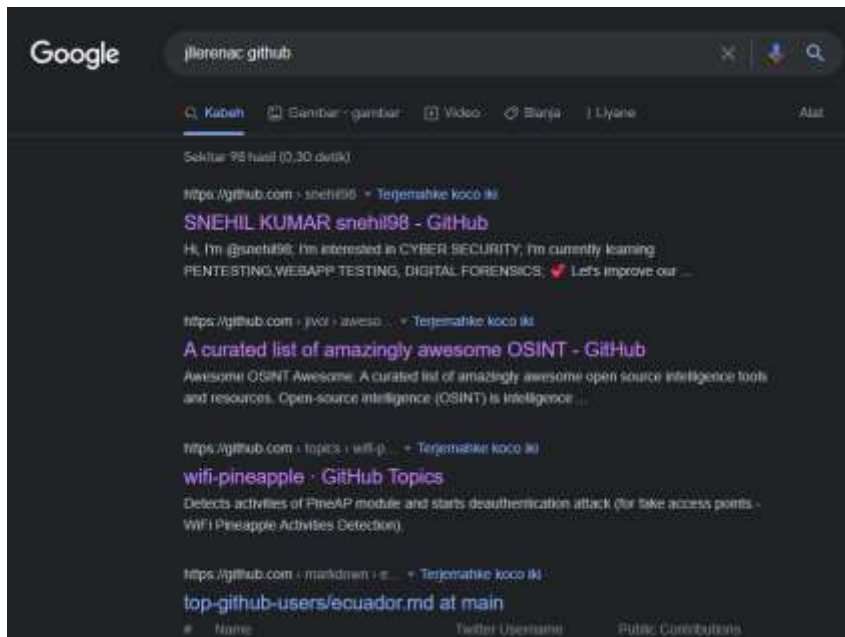

The screenshot shows the GitHub profile page for Jose Alfredo Llerena, with the username `jllerenac`. The profile includes a circular profile picture, the name **Jose Alfredo Llerena**, and the username `jllerenac`. Below the name is a "Follow" button. The bio states: "Looking to expand my knowledge in programming and cybersecurity". It also shows "Rx 4 followers · 0 following" and a location "Cuenca".

The "Popular repositories" section displays six repositories:

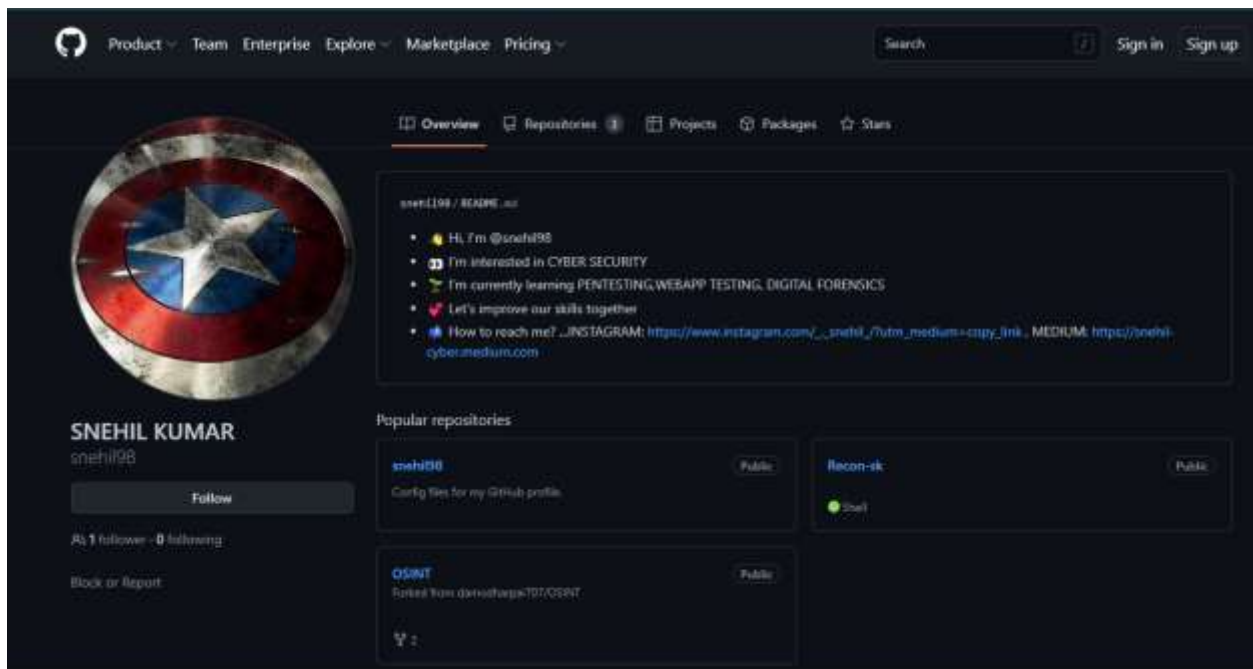

- crossover** (Public): Java
- incubator-spot** (Public): Forked from `apache/incubator-spot`, Mirror of Apache Spot, Python
- lem** (Public): Forked from `realteam-project/lem`, Linux Exploit Mapper correlates CVEs local to a Linux system with known exploits, Python
- rails-devise** (Public)
- josestack** (Public): HTML
- jobsofchallenge** (Public): HTML

Soal no 3 :

Untuk mencari file yang berisikan location bisa dengan google dengan keyword di bawah, hasil menunjukkan sesuatu yang mencurigakan, karena keyword yang digunakan adalah “jllerenac” namun hasil tidak menunjukan keyword tersebut

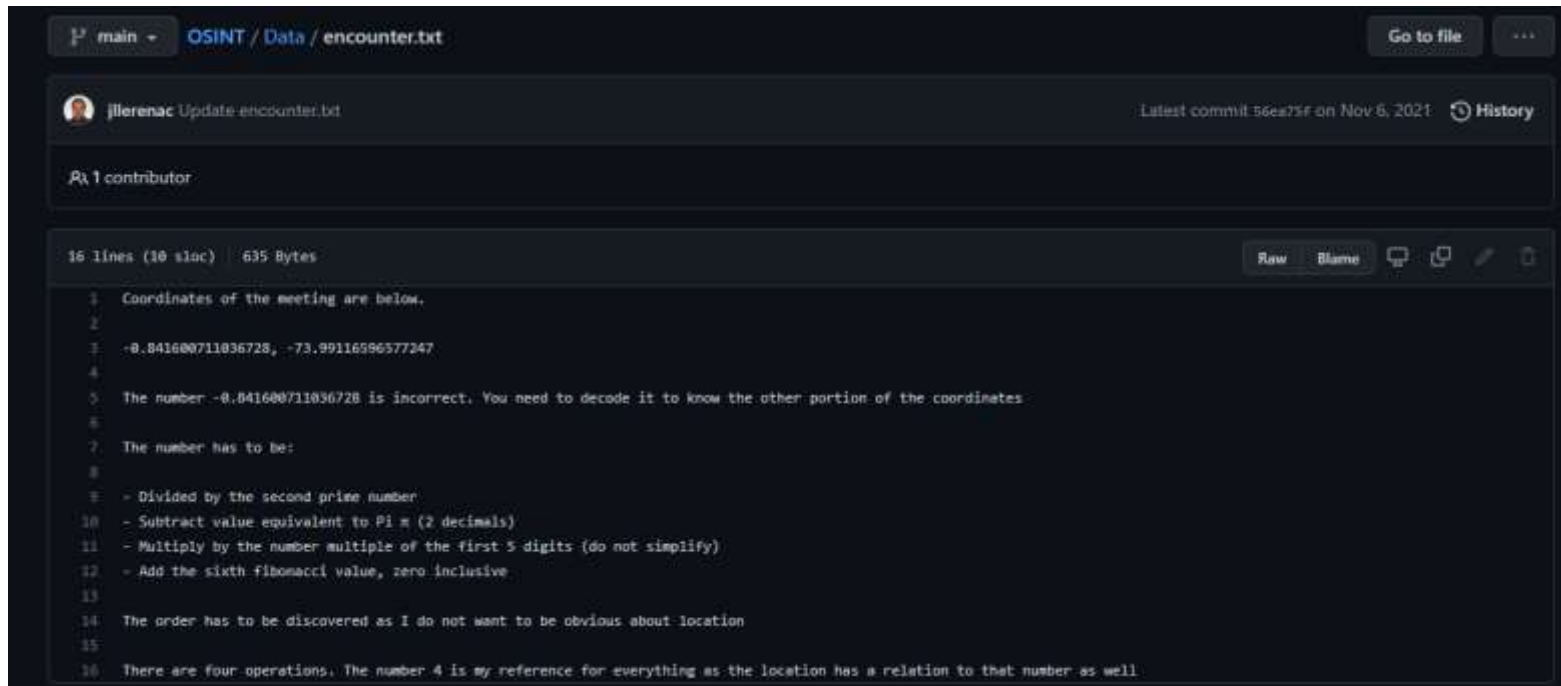

Profile dari Shehil Kumar :

Rionel Irawan / 2440009181
LA07

Setelah melakukan pencarian dalam profile tersebut, ditemukan file Bernama encounter.txt, yang isinya merupakan location yang ada di soal.

ans : encounter.txt

The screenshot shows a GitHub file viewer for the file 'OSINT / Data / encounter.txt'. The file was updated by user 'jllerenac' on Nov 6, 2021. It contains 16 lines of text, 10 slots, and 635 bytes. The text inside the file is as follows:

```
1 Coordinates of the meeting are below.  
2  
3 -0.841600711036728, -73.99116596577247  
4  
5 The number -0.841600711036728 is incorrect. You need to decode it to know the other portion of the coordinates  
6  
7 The number has to be:  
8  
9 - Divided by the second prime number  
10 - Subtract value equivalent to Pi  $\pi$  (2 decimals)  
11 - Multiply by the number multiple of the first 5 digits (do not simplify)  
12 - Add the sixth fibonacci value, zero inclusive  
13  
14 The order has to be discovered as I do not want to be obvious about location  
15  
16 There are four operations. The number 4 is my reference for everything as the location has a relation to that number as well
```

no 4

mencari coordinate

diketahui bawah terdapat coordinate x dan y, namun coordinate x adalah salah, untuk mencarinya ada kriteria-kriteria yang harus disesuaikan dengan soal yaitu :

- Dibagi dengan angka ke-2 dari bilangan prima
- Dikurang dengan 3.14
- Dikali dengan kelipatan 5 angka pertama (1,2,3,4,5)
- Ditambah elemen ke-6 dari fibbonaci

Dalam case ini digunakan script python untuk mempermudah perhitungan, sehingga coordinate x yang benar adalah 40.73597155853088

Ans : 40.73597155853088, -73.99116596577247

LA07

No5:

Setelah mendapatkan coordinate, mudah saja mencari nama lokasinya, dengan google kita mendapat lokasi :

Ans : Union Square
